Bellevue, NE 68005

For Immediate Release:

AMSTERDAM — Perigon Networks, whose main brands include PowerDNN and Managed.com, has expanded its global presence with the addition of a new datacenter in Amsterdam. The new tier IV datacenter cloud was built out in March, has undergone rigorous testing to meet the company's high standards, and is now live for PowerDNN and Managed.com customers.

This is the fifth global datacenter presence opened by the company. CEO Tony Valenti said the new Amsterdam location was chosen for the fast-paced growth the European technology community is experiencing.

"The demand for enterprise-grade website hosting in Europe is growing every day," Valenti said. "Our customers do business worldwide, and we simply have to be at the geographic center of this important market."

*The location of our new Amsterdam datacenter.*

In addition to the new Amsterdam location, Perigon Networks boasts datacenters in Manchester, England; Brisbane, Australia; and multiple locations in Omaha, Nebraska, as part of its growing global network.

With the addition of the new datacenter location in Europe, PowerDNN's already impressive PowerCasting technology has become even more powerful. Developed by the in-house engineering team, PowerCasting serves as the ultimate technology solution for geographic redundancy. It allows enterprise-level clients to broadcast their websites simultaneously from multiple global datacenter locations for seamless localized performance and business continuity.

The central location of the new Amsterdam datacenter perfectly complements the strength of PowerCasting technology.

PowerDNN's senior network engineer Patrick Sutton said, "With the Netherlands becoming the central hub for technology in Europe, there is no better place to bring the best performance to our customers."

PowerDNN is one of the largest hosting providers of DotNetNuke/DNN Evoq websites in the world. Through Managed.com, the company provides enterprise-class fully managed website platforms optimized for business-ready Content Management Systems (CMS),

including: DNN, WordPress, and Drupal. Headquartered in Omaha, Nebraska, the infrastructure and IT support company has multiple datacenters around the world, including: Amsterdam, Brisbane, Manchester, and Omaha.
